Geographic Expansion

Geographic focus

- Within Brazil and selected international investments

Business focus

- Businesses we know – power generation and transmission, electricity distribution, natural gas

Type of investments

- Acquisitions – main driver of short term growth
- Greenfield projects – vehicle for long term growth

Disciplined investment criteria

Record of Successful Acquisitions

Business Model for Growth

- Record of 5 acquisitions in last 5 years totaling R\$ 3B (excluding debt)
- Partnerships with Equity Investment Funds (FIPs) in recent acquisitions (Terna and Light) create a new growth driver
- Structuring of partnerships with FIPs produces a growth strategy that optimizes capital needs
- Attractive return to investors, at low risk
- Best-in-class Corporate Governance
 - Investors enter as financial partners and Cemig as operating partner
 - Possibility of increasing stake in the future
- Strategic positioning with minority or equal interests assures Cemig greater access to financial capital markets
- Innovative acquisition structure enables Cemig to use it in other expansion opportunities, aligned with its Long-Term Strategic Plan.

Continually Improving Operating Efficiencies

- Continuous technological improvement
- Cost reduction program
 - 135 cost cutting initiatives
 - Voluntary Retirement Programs:
 - From 2008 to 2011: 1,500 employees
 - Automatization, new processes
 - Centralization of activities
 - Expense reduction related to materials, services and other expenses

Clear Priorities for 2010

Priorities

- 1 Execute cost reductions
- 2 Integrate Terna and Light acquisitions
- 3 Participate in green fields
- 4 Select new acquisitions

Why Invest in Cemig

Leading power utility in Brazil

Powerful drivers fueling growth

Sound Balance Sheet

Consistent profitable track record

Strong Dividend Policy

World Leader in Sustainability

Corporate Governance: implementation of best practices

Highlights

- Code of ethics;
- 6 BoD members appointed by minority shareholders;
- BoD approves all investments above R\$14mn;
- BoD approves nomination of external auditors;
- Executive Board coordinates external auditor selection process (in compliance with the Brazilian Procurement Legislation for state owned companies);
- Fiscal Council plays Audit Committee key role, including:
 - Accounting practices;
 - Dividend policy;
 - Prevention of fraud;
 - Financial statements analysis.
- SOX compliance:
 - Sections 302 and 404 Certification;
- BOVESPA level 1;
- NYSE listed company practices.

Leadership in sustainability, a core value at Cemig

- Social and Environmental responsibilities
- Long-term vision commitment
- To guarantee the preservation of our activities
- Prevent undue costs to be passed to the society through a balanced relationship with the environment and the community
- Recognition of our actions to ensure sustainability:
 - Selected member of Dow Jones Sustainability World Index for the **eleventh** time in a row, now world leader in Utilities “Supersector”
 - Selected member of Corporate Sustainability Index of the Sao Paulo Stock Exchange (Bovespa) for the **fifth** year in a row.

Why is Cemig Sustainable?

1. Financial Strength
2. Strategic Management
3. Commitment to clients
4. Profitable Investments
5. Technological Innovation
6. Commitment to stakeholders
7. Dedication towards the environment
8. Focus on Renewables
9. Care for human capital
10. Social Responsibility

Global Compact

- In 2009 Cemig joined the Global Compact and published its “Corporate Social Responsibility” handbook.

The principles of the Global Compact

United Nations Global Compact

1. Businesses should support and respect the protection of internationally proclaimed human rights in their area of influence; and
2. make sure that they are not complicit in human rights abuses.
3. Businesses should uphold the freedom of association and the effective recognition of the right to collective bargaining;
4. elimination of all forms of forced and compulsory labor;
5. the effective abolition of child labor; and
6. elimination of discrimination in respect of employment and occupation.
7. Businesses are asked to support a precautionary approach to environmental challenges;
8. undertake initiatives to promote greater environmental responsibility; and
9. encourage the development and diffusion of environmentally friendly technologies.
10. Businesses should work against corruption in all its forms, including extortion and bribery.

Opportunities of raising funds to finance expansion

Cemig is ready to enjoy market liquidity

Local Bank Market

- Debt rollover
- Assignment of receivables
- Project Finance (Cemig as a minority shareholder)

Local Capital Market

- Debentures are the major source of funds for investment (long term and inflation indexed)
- Securitizations

International Capital Market

- Eurobonds (high liquidity, long term, but proceeds used only to refinance existing debt)
- Perpetual bonds as a viable alternative in the long run

Multilateral Agencies

- CAF, JBIC, KfW, World Bank, IDB
- Long term
- Attractive costs
- Tax breaks on remittance of interests

- **Eletrobrás:** long term, attractive costs, but restricted to rural electrification

Agenda

- Background
- Strategy Overview**
- Business Outlook
- Acquisitions
- Results
- Market Recognition
- Regulatory Framework
- Others

Long Term Strategic Plan addresses sustainable growth...

- Broadening of CEMIG's area of activity, focusing on the electric industry
 - Growth within Brazil's geographical area
 - First steps towards international investments
 - Expansion in line with Brazilian regulatory limits and sustainable growth
 - Invest only in the power industry and gas distribution related business
- Addressing shareholders' long-term interests:
 - Dividend policy: minimum a 50% of net income payout and extraordinary dividends, provided cash availability (stated in the bylaws)
 - Corporate governance focused on transparency and respect of minority shareholders' interests
- Incorporation of our goals and commitments to our bylaws secures stability of the company's long-term planning
 - Capex limited to 40% of EBITDA:
 - Net Debt limited to 2x EBITDA (2.5 x with acquisitions)
 - Net Debt limited to 40% of Total Capitalization (50% with acquisitions)

...Investment policy to guarantee sustainable growth

- **Pillars of our activity:**
 - Focus on electricity sector and related activities
 - Profitability: return compatible with each business
 - Partnerships with strategic investors: corporate governance
- **Growth through new projects**, long-term vision
 - Opportunities in electricity generation and transmission
- **Acquisitions, drivers for short-term growth**
- **Investment Criteria Selection:**
 - Investments that add value to our shareholders
 - Continuous technological and operational improvement
 - Best management practices
- **Guarantees to ensure profitability (stated in the bylaws):**
 - Investment only in power generation, transmission and distribution and gas&oil projects that offer rates of return compatible with the risk of each business but higher than the level projected in the Strategic Plan, with the exception of legal obligations.
 - Operational expenses and revenues of electricity distribution companies, must be kept aligned to the tariff adjustments and reviews.

Strategic Plan Results: Dividends

- ✓ Approved proposal for 2009 Net Income distribution:
 - Dividends of R\$ 931 million
 - Dividends per share: R\$1.50
 - Stock Dividend of 10%

Dividends
(R\$ Million)

Dividend Yield (%)

Continuous improvement of our KPI

Key performance indicators in line with Long Term Strategic Plan

Agenda

- Background
- Strategy Overview
- Business Outlook**
- Acquisitions
- Results
- Market Recognition
- Regulatory Framework
- Others

Basics of our business portfolio

- Power generation
 - More competitive environment
 - Regulated market : long term contracts with distributors sales through public auctions.
 - Un-regulated market : medium term contract with large clients. Contract terms bilaterally negotiated.
- Power transmission
 - Most successful regulation
 - Stable cash flow: fixed income alike investment
- Electricity distribution
 - Strongly regulated
 - Operating expenses: Full pass-through mechanism. Yearly adjustment for non controllable costs and inflation.
 - 5 year rate setting review: sharing productivity gains with users
 - Revenues come from grid use and sales to captive market
- Natural gas distribution
 - Same concession area of Cemig Distribuição
 - Partnership with Petrobrás (Petrobrás 40% and Cemig 55%)
- Telecommunication backbone services
 - Synergy: usage of power transmission lines for fiber optics cables
 - 60% of capacity used by Cemig Group

Power Generation: Cemig

Installed Capacity (June/10)

Plant	Installed capacity (MW)	Efective Power (MW Average)
Largest hydroelectric plants

Cemig is also evaluating feasibility projects related to the use of solid waste and solar plants.

(*) Includes Igarapé s conversion of 250 MW into natural gas

Cemig GT - Balance of supply and demand

CEMIG GT: Power generation prices guidance

Guidance for Average Prices – Cemig GT*

(R\$/MWh)

*Constant base – June 2010

**Without secondary power

- ✓ Settlement of a large amount of secondary power at spot prices (PLD) in 2010;
 - If excluded, the average price would be of approximately 100.00 R\$/MWh

- ✓ Expected contract renewals and new contracts were secured at higher than current prices, but below those considered in 2009 s estimates
 - The strongest effects are seen in first years.

- ✓ Indexed contracts to US dollars and to the variation of the power share of the Tariff Readjustment Index of the local distributor were updated at lower values than those estimated in 2009

- ✓ Renegotiation of existing contracts
 - Price hikes to mantain NPV
 - Transfer of contracts (linked to power purchases), those with higher prices, to Cemig Trading
 - Term extension, including new sales, following the future price trends

Power Generation Sales Volume Estimates

CEMIG GT

MARKET - TWh

- ✓ 2010: Participation in the Secondary Energy Market - generation is above the physical guarantees as a result of the favorable hydro scenario, settled at spot prices (PLD).
- ✓ After 2011: Power Purchases, excluding secondary energy.

Structural Energy Balance (Average MW)

Power Generation Auctions:2010

- **2010 Special Power Auctions: Belo Monte**

- 11,233 MW
- 30 years long contracts
- Price of R\$ 77.97/MWh

- **2010 New Power Auctions:**

- A-5: July 30th, 327 avg MW, average price of R\$ 99.98/MWh
 - Exclusive for hydro power capacity
 - Garibaldi power plant (SC): 178 MW of installed capacity and price of R\$ 108/MWh
 - Colíder power plant (MT): 300 MW of installed capacity and price of R\$ 103/MWh
 - Ferreira Gomes power plant (AP): 252 MW of installed capacity and price of R\$ 70/MWh
 - Santo Antônio do Jari power plant (AP/PA): 300 MW of installed capacity and reference price of R\$ 100/ MWh for 10% of the capacity (concession has already been awarded)
 - Small hydro power plants price of R\$ 154/MWh

- **2010 New Power Auctions:**

- A-1: November, 30th

- **2010 New Power Auctions:**

- A-3: August 26th : 714.3 Avg MW
 - Wind Power (50) and biomass cogeneration (1) power plants: 662.2 Avg MW
 - Average Price: R\$134.23/MWh
 - Small Hydro Power Plant (PCH): 48.1 Avg MW, sold by 5 PCHs
 - Average Price: R\$146.99/MWh

- **2010: Reserve Power Auction**

- August 26th : 388.7 Avg MW with an average price of R\$125.07/ MWh
 - Wind Power: R\$122.69/MWh, 20 years long contracts
 - Biomass Cogeneration: R\$134.47/MWh, 15 years long contracts
 - Small Hydro Power Plant (PCH): R\$ 130.73 /MWh, 30 years long contracts

Business Opportunities: Small Hydros Program

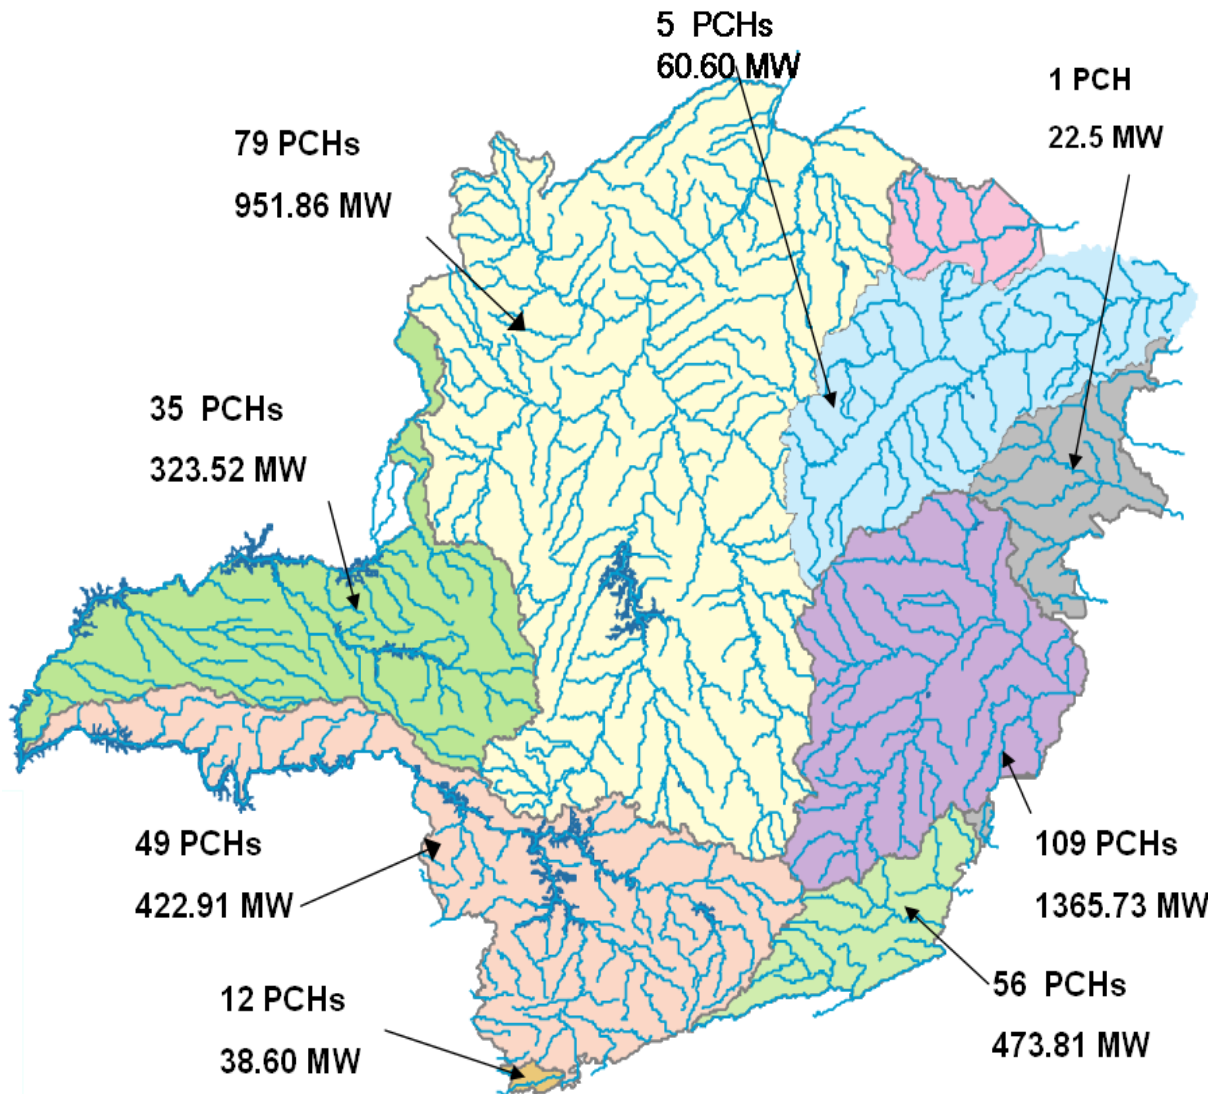

➤ **Short-term supply alternative**

➤ **Successful funding format:**

- 30% Equity
 - Cemig 49%
 - Private Investor 51%
- 70% Debt
 - BNDES

➤ **Current status:**

- Cachoeirão Small Hydro Power Plant (27 MW) in commercial operation;
- Pipoca Small Hydro Power Plant (20 MW) estimated to start operation in the 2nd half of 2010;
- 04 Small Hydro Power Plants (44 MW) construction is estimated to begin in 2011 (Fortuna II, Dores de Guanhões, Senhora do Porto e Jacaré);
- 05 Small Hydro Power Plants (77 MW) in evaluation.

PCH = Small Hydro Power Plant

Business Opportunities: biomass cogeneration

Sugar and ethanol potencial in Minas gerais

Plants	Quantity*	Generatn. (MWa**)	Surplus (MWa**)
Existing	12	750	300
Expected	22	2,416	1,631
Total	34	3,166	1,931

* Just includes plants available to generate and sell power

**Average generation in 6 months of the year

- ✓ Approximately 75% of the plants are located in the heavy-industry region known as the Minas Triangle
- ✓ Generation available from April to September, the dry season for the hydro power plants
- ✓ Solutions offered by Cemig through its subsidiaries:
 - Connection of Plants to the national electricity grid.
 - Sale of excess electricity generated not consumed by the Plant itself.
 - Formation of corporate partnerships, creating Special-purpose Companies, to implement or retrofit thermal plants.

Brazilian hydroelectric power generation potential

Situation as of June 2009, MW

*Amazon region:
Estimated capacity to be developed is
63% of the total available*

Santo Antônio hydro plant – basic information

- 3,150 MW of installed capacity
- 2,218 MWAverage of energy > Capacity Factor (CF) of 69%;
- Price: R\$78.87/MWh (equivalent to R\$99/MWh for a traditional 55% CF Hydro Power in Brazil)
- Winner consortium:
 - 10% Cemig
 - 39% Furnas
 - 20% FIP (Investment Fund) Amazônia Energia
 - 18.6% Odebrecht
 - 12.4% Andrade Gutierrez
- Start-up schedule:
 - 72 MW in 2011; 1,074 MW in 2012; 858 MW in 2013; 358 MW in 2014 and 788 MW in 2015
- Construction on schedule

Santo Antônio hydro plant – basic information

- Low-fall plant (13.9 m), average estimated flow 568 m³/s, lake 271 km², resulting in lower ratio between reservoir area and total energy generated than in other Amazon region plants: index of 0.09
 - Balbina (250 MW, 2,360 km² reservoir): index 9.44
 - Samuel (217 MW, 584 km² reservoir): index 2.69
 - Manso (210 MW, 387 km² reservoir): index 1.84
 - Tucuruí (4,000 MW, 2,414 km² reservoir): index 0.61
 - Belo Monte (11,000 MW, 440 km² reservoir): index 0.04
- Low population on banks of Madeira River:
 - 1,762 people affected ,in 415 homes
- EPC Group
 - Construction leaders:
 - Norberto Odebrecht and Andrade Gutierrez
 - Manufacturers of rotors and generators:
 - Alstom, VA Tech Hydro and Voith

Wind power potential in Minas Gerais

Cemig is one of the pioneer companies in terms of wind generation in Brazil through the *Morro do Camelinho* plant, which was connected to the grid in 1992.

Wind power map of Brazil:

Brazil has a theoretical wind power generation potential of 143.5 GW, estimated at a height of 50 meters⁽¹⁾. This is more than the total volume of generation capacity currently installed in the country of 108.4 GW⁽²⁾. Wind power currently supplies 0.71% of this total, or 765.5MW⁽²⁾.

Wind power map of Minas Gerais:

The Wind Atlas of Minas Gerais indicates wind potential of 39 GW, for a height of 100 meters⁽³⁾. This is 2.7 times the output of the Itaipu Plant, or 3.5 times more than Cemig's Belo Monte Plant.

Height	Plant potential
50 m	10.6 GW
75 m	24.7 GW
100 m	39.0 GW

Power Transmission Capacity (Km)

	2005	2006	2007	2008	2009	Aug/10
525-Kv lines	0	0	0	51	77	101
500-kV lines	2,165	2,592	2,488	2,788	3,594	4,421
345-kV lines	1,976	1,969	2,001	2,001	2,167	2,358
230-kV lines	751	803	824	915	1,668	1,888
Total	4,892	5,364	5,313	5,755	7,506	8,768

- Charrúa – Nueva Temuco transmission line start-up in Jan. 2010:
 - 220 kV, 205 km
- Cemig stands for 10% of Brazil s market

Transmission: Present all over Brazil

- ✓ Cemig is now Brazil's third largest transmission group:
- Total lines: 8,348 Km
- Consolidated Permitted Annual Revenue (RAP): R\$ 859 million, including Transchile
- Present in 13 States of Brazil and in Chile

Power Transmission: Expansion

✓ Acquisitions in 2009:

- Taesa (formerly Terna): R\$ 1.90 billion for a 56.7% stake
- Increased interest in TBE: R\$ 605 million. Current stake of 40%.

ASSETS	RAP (Permitted Annual Revenue) - R\$ million	Cemig stake (%)	Start up date
EBTE (775km) ¹	27.3	68% ³	06/2010 (partial)
Transm. Centro Oeste	10.5	51%	03/2010
Santos Dumont substation ²	8.3	40% ³	05/2011

Transmission capacity (km)

¹ EBTE: indirect holding through EATE.

² Indirect holding through ETEP.

³ Includes direct and indirect holding.

Charrúa–Nueva Temuco Transmission Line

- **Voltage:** 2x 220kV
- **Length:** 205 km
- **Concession period:** 20 years
- **Stake:** 49%
- **Total investment:** US\$88 million
- **Annual Revenue:** US\$65 million
- **Financing:** 63% of the investment
- **Capital from Cemig :** US\$20.3 million
- **Start of works:** April 2007
- **Start of operation:** January 2010

- **2010 Auctions**

- **June, 11th**

- 9 lots totaling 700 Km of lines
 - These assets will be built in 7 states
 - 30 years contracts and estimated total capex of R\$700 million
 - 11 substations and 4 transmission lines
 - Total RAP (max): R\$ 84 million
 - Five companies and one consortium won these lots
 - RAP: average winning bid of R\$ 57 million
 - 31.57% discount in average

- **September, 3rd**

- 3 lots totaling 512 Km of lines and four substations
 - These assets will be built in three states
 - 30 years contracts and estimated total capex of R\$300 million
 - Total RAP (max): R\$ 39 million
 - One federal company won these three lots
 - RAP: winning bid of R\$ 19 million
 - 50.9% discount in average

- **November, 26th**

- 3,000 km of lines could be auctioned
 - These assets will be built in 11 states

The 1st Transmission Tariff Review

The criteria of this Tariff Review were set by Aneel Normative Resolution 257/07, the principal ones being:

- a. **WACC:** 9.18% p.a.
- b. **Operational Costs:** Defined by application of efficiency parameters, obtained by the DEA benchmarking method, to companies' real costs.

DESCRIPTION	PREVIOUS VALUE (R\$)	REVIEW VALUE (R\$)
Total Annual Permitted Revenue (RBSE + RBNI)	316,107,885.62	333,010,887.33
Tariff Repositioning Percentage		5.35%

- Backdated payment, including monetary updating: R\$ 158 million.
- RAP for 2009 (with charges/taxes) goes to R\$ 475 million.
- Gross base: R\$ 2.5 billion
- Net base: R\$ 1.1 billion

The financial effects of this review are taken into account in Cemig's Guidance for 2010.

Electricity Distribution Capacity

Network in km	2007	2008	2009	jun/10
SUB-TRANSMISSION	16,676	16,810	16,959	17,213
161-kV lines	55	55	55	55
138-kV lines	11,145	11,254	11,442	11,695
69-kV lines	4,510	4,535	4,508	4,508
Lines below 69 kV	966	966	954	955
DISTRIBUTION	429,560	442,749	450,316	456,800
Urban Overhead lines	90,524	91,550	95,539	101,311
Urban Underground lines	1,049	1,380	1,432	2,144
Rural Overhead Lines	337,987	349,819	353,345	353,345
TOTAL	446,236	459,559	467,275	474,013

- Cemig stands for 12% of Brazil's installed capacity
- We are the largest distribution network as measured by either Km of lines and number of consumers

Distribution: Expansion

- ✓ Acquisitions in 2009:
 - Increase of stake in Light, jointly with an FIP*
 - R\$ 785 million for each block of 13.03% in Light
 - Payment to PCP after approvals and stockholding reorganization of Equatorial
 - Currently Cemig holds a direct interest in Light of 25.53%
- ✓ Light announces new Executive Board
 - Leadership of Gerson Kelman ensures stability in transition
 - Three new Chief Officers, coming from Cemig
 - More than 25 years activity in electricity sector
 - Will operate in strategic areas: distribution, generation, finances
 - Challenges are: improvement of operational indicators; and capture of synergies with Cemig

*First block paid. Payment to PCP will exclude dividends

Cemig D: sales by category on June 30, 2010

Electricity sold – GWh: Changes, 2Q10

Sales by category - GWh

TYPE	1H10	1H09	Change %
Residential	4,045	3,862	4.7%
Industrial	2,272	2,360	-3.7%
Commercial	2,424	2,313	4.8%
Rural	1,106	970	14.0%
Other	1,475	1,421	3.8%
Clients	11,322	10,926	3.6%
CCEE	946	217	335.9%
Total	12,268	11,143	10.1%

+14%

+7%

- ✓ Growth in all consumer types due to recovery in the economy of Minas Gerais
- ✓ Adjusted for the migration of clients to the free market, total sales to clients were 7% up 2Q10/2Q09, boosted by the industrial category, up 14% 2Q10/2Q09
- ✓ Overcontracting in 2010 is being adjusted through revisions of contracts, currently in progress, and by adjustment of modeling in the CCEE, which would reduce the amount of excess supply in 2Q10 from 650 GWh to 300GWh
 - Actions taken over the year should result in the total electricity bought by Cemig D in the year being close to 103% of the total load.

Percentage by category – Final Consumer 1H10

Electricity Distribution tariff review

- Allowed return on asset approach:
 - Benchmark WACC: was 11.26% in 1st cycle (2003)
 - Tariff review: WACC of 9.95% in 2nd cycle (2008)

- New Tariff Review methodology:
 - Reference company model disclosed:
 - Black box opened.
 - Asset base review every 10 years (proposal): CEMIG in 2013;
 - Regulatory energy losses and delinquency rate specific for each concession area;
 - Special obligation financed asset depreciation will be granted in the long run;
 - X Factor: excluded the influence of Consumers Satisfaction Index.

- Cemig Distribution 2nd tariff review:
 - 2008 Preliminary Result: -12.24%
 - 2009 Final result: -13.66%
 - Regulatory Ebitda Margin: 21%
 - Losses coverage: sufficient
 - Market Growth: 3.17% p.a. (less risk than in 2003)
 - X Factor (Xe) : 0.14%

Aneel's Proposal for the 3rd Cycle: WACC

Regulatory Proposal		
WACC	2nd Cycle (Final)	3rd Cycle (Aneel's Proposal)
Debt		
Cost of Debt (Rd)	14.97%	11.50%
Taxes (t)	34.00%	34.00%
Debt-to-Capital (D/D+E)	57.16%	60.00%
WAC of debt	5.65%	4.55%
Equity		
Risk free Rate (Rf)	5.32%	4.96%
Market Premium (Rm – Rf)	6.09%	5.78%
Beta (US)	0.55	0.65
Country Risk (Rb)	6.69%	4.42%
Regulatory Risk (Rf)	1.33%	0.00%
Cost of Equity (Re)	16.71%	13.14%
Equity-to-Capital (E/D+E)	42.84%	40.00%
WAC of Equity	7.16%	5.25%
WACC (nominal, US\$)	12.81%	8.81%
Us Inflation (r)	2.60%	2.48%
WACC (real, US\$)	9.95%	7.15%

Aneel's Proposal for the 3rd Cycle: Main Changes

- ✓ Opex:
 - Two stages:
 - Reference Company model of the 2nd Cycle (2008) adjusted to inflation and productivity gains and sales volume increase – First Stage
 - Benchmarking with peers in order to verify Stage 1 and produce component (t) – Second Stage; Cemig is in the G5 group
- ✓ X Factor: New methodology takes into account three components
 - Costs trend: (T) - Reference Company + Benchmarking, ex-ante. More efficient companies will capture gains through all the tariff cycle. Companies will be divided in clusters.
 - Productivity: (P) – Adjusted annually, ex-post. Function of sales volume growth.
 - Quality: (Q) – Companies divided into 4 groups according to the concession area. Better quality supply rewarded with tariff increases. Management through benchmarking of peers. Calculated annually, ex-post.

Aneel's Proposal for the 3rd Cycle: Main Changes

- ✓ Energy Losses: Regulatory energy losses will be defined according to the complexity of each concession area
 - Companies ranked and then grouped. In a ranking from more to less complexity, to deal with electricity losses, Cemig was considered 24th and Light 7th
 - The target for each company will be the top performer in their group in terms of energy losses

- ✓ Regulatory Asset Base: Just the additional assets will be valued
 - ANEEL's Proposal is not to review the entire asset base
 - In case of Cemig the asset base was expected to be fully reviewed in 2013

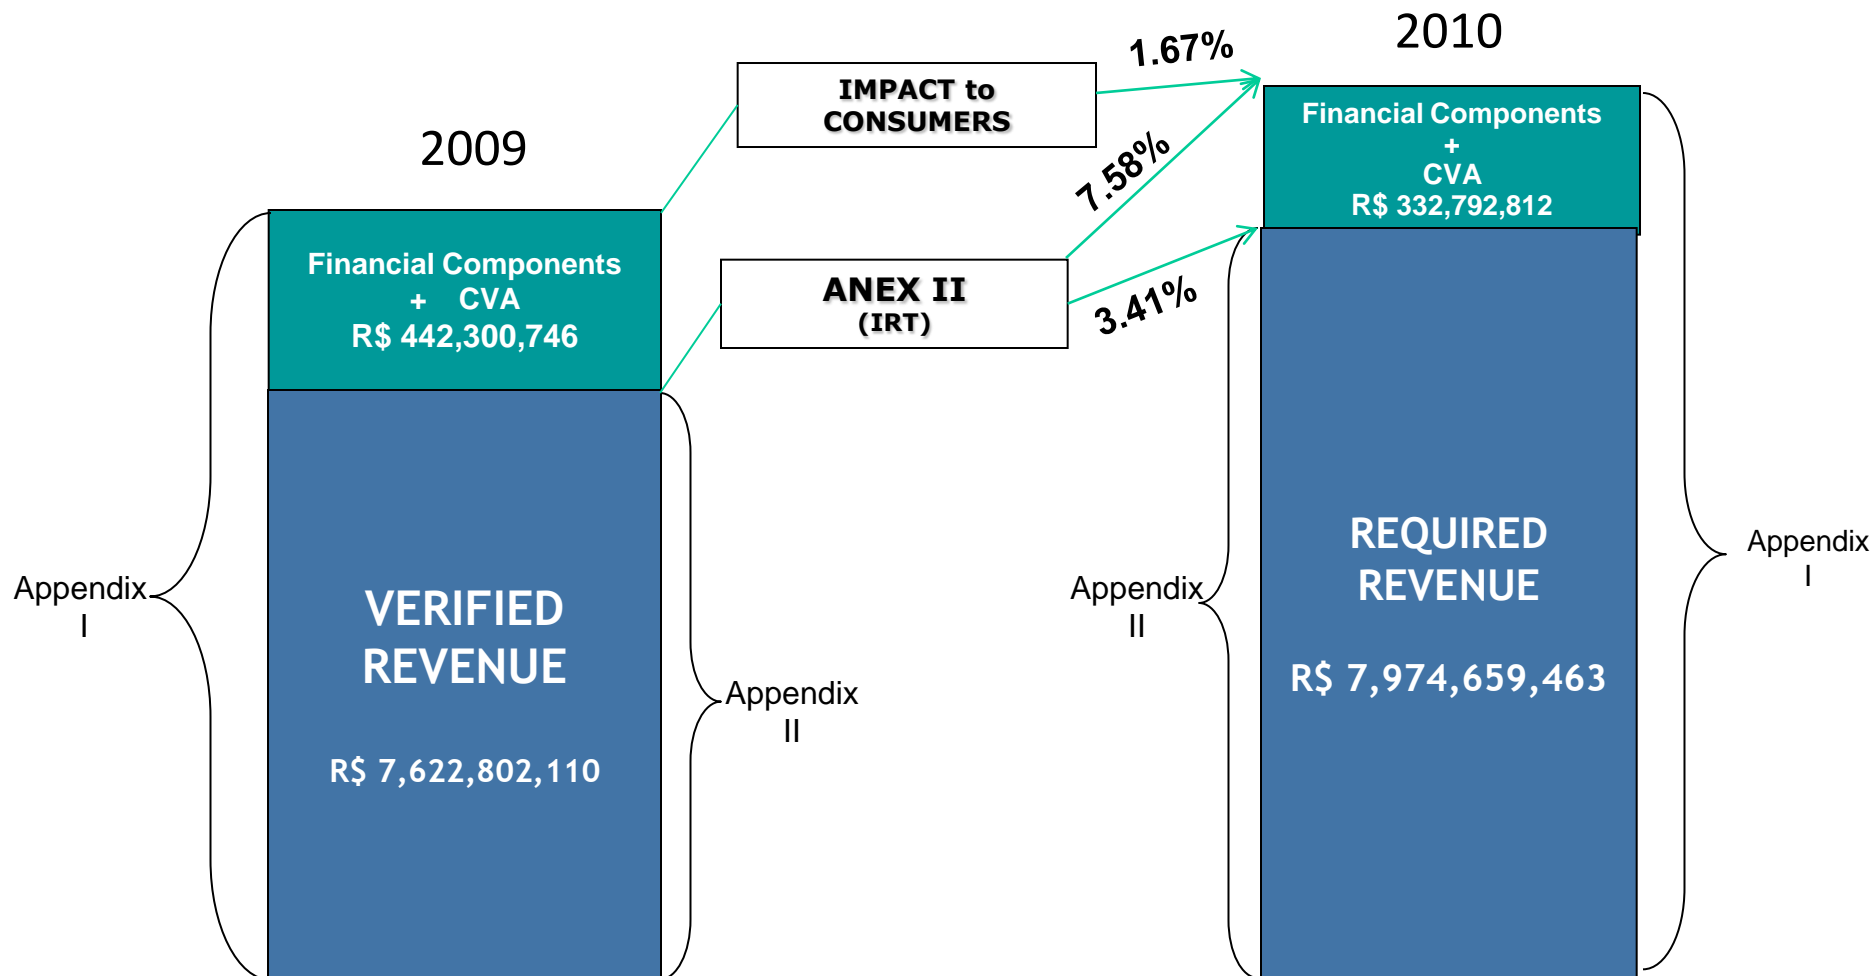

Cemig D 2009 readjustment and Impact on Tariff

Appendix I: Tariffs billed to consumers, including RTE, CVA and financial components, without taxes.

Appendix II: Tariffs considered “clean”, base for posterior readjustments, without taxes (ICMS, Pasep/Cofins)

Cemig D 2010 readjustment and Impact on Tariff

Appendix I: Tariffs billed to consumers, including RTE, CVA and financial components, without taxes.

Appendix II: Tariffs considered “clean”, base for posterior readjustments, without taxes (ICMS, Pasep/Cofins)

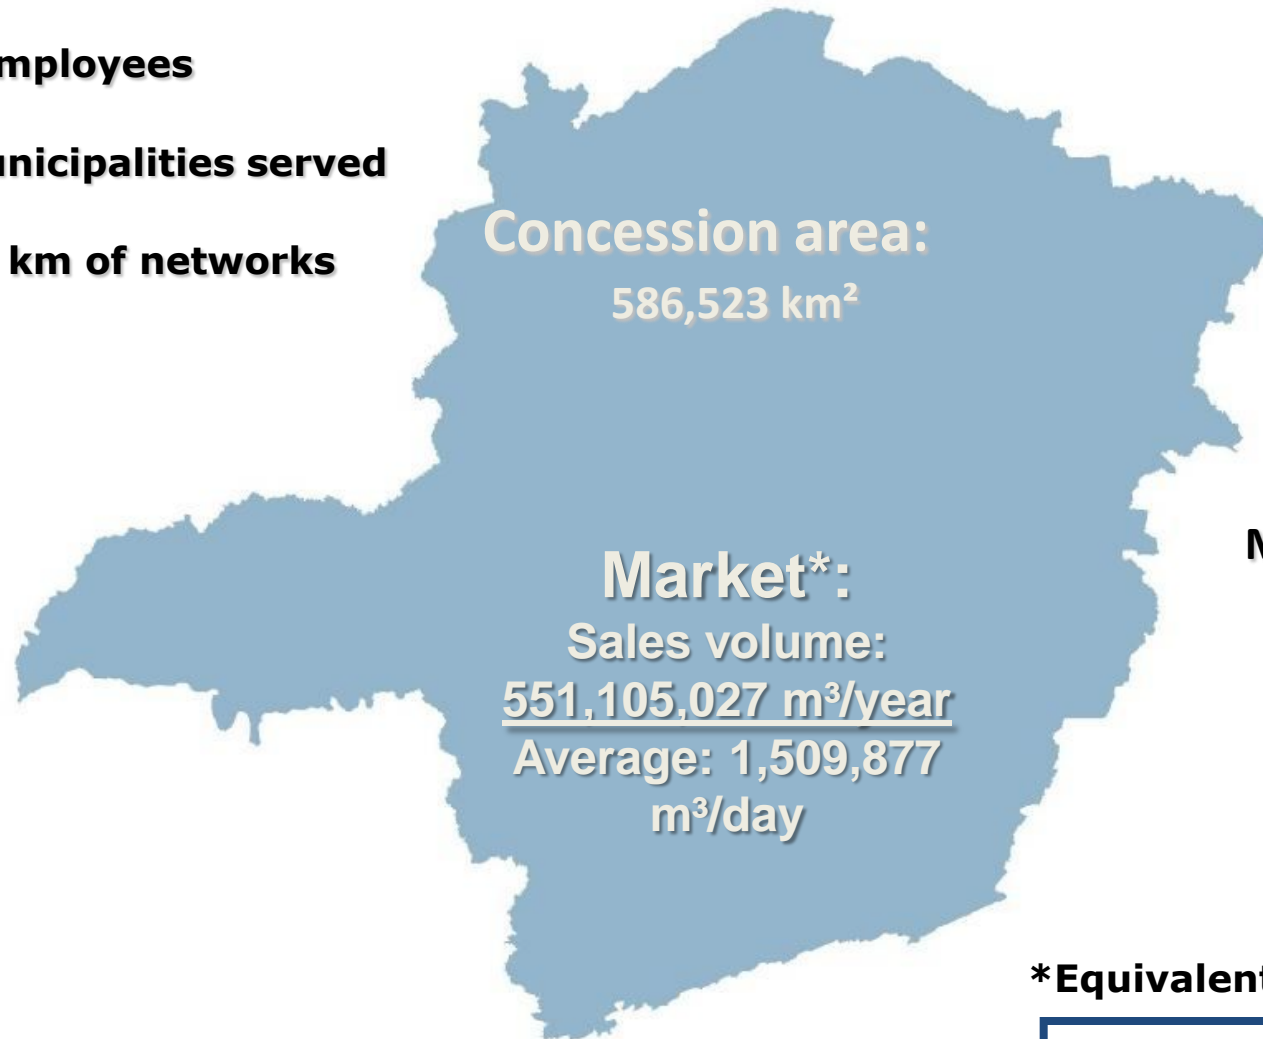

1st Review 2003 vs 2nd Review 2008/2009

1st Tariff Review 2003	2nd Tariff Review 2008	2nd Tariff Review 2009 Final
<ul style="list-style-type: none">• Regulatory Ebitda Margin: 21.2%• Losses coverage: inadequate• Market Growth: 3.7% p.a. (with risk of being lower; at the time, was 2.0% p.a.)• X Factor (Xe): 1.25%	<ul style="list-style-type: none">• Regulatory Ebitda Margin: 21%• Losses coverage: sufficient• Market Growth: 3.17% p.a. (less risk than in 2003)• X Factor (Xe) : 0.84%	<ul style="list-style-type: none">• Regulatory Ebitda Margin: 21%• Losses coverage: sufficient• Market Growth: 3.17% p.a. Natural Gas Distribution - Gasmig

- ✓ **274 Clients (conventional), 2 Thermal power plants**
- ✓ **220 employees**
- ✓ **23 municipalities served**
- ✓ **695.3 km of networks**

Major works:
Sul de Minas Project
– Completed
Vale do Aço project
– 67% completed

***Equivalent in million BTU:**

11,345,639 MBTU/year

31,084 MBTU/day

Natural Gas Expansion: Cemig's consortium wins Brazilian Oil and Gas Bids

- ✓ Strategic initiative seeks means to ensure supply of natural gas for distribution, through Gasmig, and for thermal power generation

Consortium Structure

Winning Bid

- ✓ Cemig's stake in the consortium of 24.5%
- ✓ Private partners provide expertise (51% as a whole)
 - ✓ Orteng Equipamentos e Sistemas
 - ✓ Comp Exploração e Produção de Petróleo e Gás
 - ✓ Delp Engenharia Mecânica
- ✓ Companhia de Desenvolvimento de Minas Gerais, 24,5%

- ✓ Signature Bonus of R\$ 11.3 million to be paid as of the signature of the Concession Contracts (expected date: april/2009)
- ✓ Minimum Exploratory Program of R\$ 25.6 million. Represents a commitment, with the Oil and Gas National Agency, to investment over the next 4 to 5 years

Exploratory Block	Location	Characteristics	Expected Fluid	Winning bids			Qualified Operator
				Signature Bonus (R\$ 000)	Minimum Exploratory Program (R\$ 000)	Total Bid	
POT-T-603	Potiguar basin of the State of Rio Grande do Norte	Mature basin	Light crude oil	R\$ 2,001	R\$ 4,038	R\$ 6,039	SIPET

Total	-	-	23.7	119.3	157.3	181.2	481.5

- ✓ R\$ 181 million of 2009 consolidated Net income came from acquisitions made in 2004–2008
- ✓ 2009 P/E of these acquisitions is 3.7
- ✓ Dividends and other proceeds received from these companies represent 72% of the amount invested.

Holdings acquired in 2009 add immediate income

(1) 2009 numbers are pro-forma; they include the increased stake in **Light** (from 13% to 26%) and **TBE** (from 17% to 39%), and assume 100% subscription to the public offer to buy the free float of **Taesa**.

Cemig Group grows through management of assets

✓ As well as operators, we have become managers of assets, in all segments of electricity:

✓ Generation (MWh)

■ Cemig consolidated

■ Management for partners

Acquisition of Brookfield's shares in TBE

- ✓ In 2006 Cemig acquired a Stake in TBE
- ✓ Cemig increased its stake in TBE: R\$505M paid in 2009
 - ✓ Now Cemig holds approximately a 35% interest in TBE

Stakes before the acquisition					
	EATE	ECTE	ENTE	ERTE	ETEP
CEMIG	17.68%	7.50%	18.35%	18.35%	19.67%
Eletrobrás	29.30%	0%	0%	0%	21.33%
Other partners	53.02%	92.50%	81.65%	81.65%	59.00%
Stakes after acquisition of Brookfield's shares					
CEMIG	35.34%	13.37%	36.69%	36.69%	39.33%
Eletrobrás	29.30%	0%	0%	0%	21.33%
Other partners	35.36%	86.63%	63.31%	63.31%	39.34%

- On July 14, 2009 Cemig acquired the 4.9% of the shares held by Brookfield in the companies of the TBE Group, EATE, ENTE, ERTE and ETEP and 3.8% of ECTE, for R\$ 25,047,488.02. Including the transaction made on June 30, 2009, in which Cemig acquired 95% of Brookfield's shares in TBE (74.5% in ECTE), the total disbursed was R\$ 504,976,101.08.

Acquisitions

Increased participation in TBE: MDU Stake

- ✓ Approved by the Board of Directors on October 29
- ✓ Seller: MDU Resources Luxembourg II LLC, S.à.r.l
- ✓ Approximate amount: R\$100 million referring to September 30, 2009. Final amount depends on whether or not the partners exercise their right of first refusal
- ✓ Shares in the following companies will be acquired:

Company	Voting Capital	Total Capital
ENTE	13.3%	13.3%
ERTE	13.3%	13.3%
ECTE	Up to 10%	Up to 10%

- ✓ The operation still depends on approval by ANEEL, BNDES and other financing entities
- ✓ This acquisition shows Cemig's growth strategy through minority shares, ensuring partners the right of first refusal

Acquisition of holdings in wind farms: The Transaction

The Transaction

- Acquisition of 49% stockholdings in three wind farms (99.6MW) in the Brazilian State of Ceará, currently owned by **Energimp S.A.** (IMPISA).
- Price paid for the shares: R\$ 223 million, to be paid to IMPISA after approval by Aneel, the Caixa Econômica Federal (“CEF”) and Eletrobrás.
- Cemig has no project completion risk in relation to the wind farms.
- Stockholders’ Agreement between Cemig and IMPISA sets the conditions for governance and management.

Resulting stockholding structure

Equity + debt: components of EV

- R\$ million

* Includes interest on financing by CEF, pro-rata, up to estimated operational startup dates.

Principal financing

- Creditor: Caixa Econômica Federal (CEF)
 - Amount: R\$ 376 million
 - Tenor: 12 years
 - Rate: TJLP +2.5% p.a.
 - Grace period: 6 months

Acquisition of holdings in wind farms: The Assets

Locations

Volta do Rio Wind Power Plant

- Location: **Acaraú** (240km from Fortaleza), Ceará
- Equipment: 28 rotors of 1,500KW each
- Installed capacity: 42.0MW
- Load factor : >45%
- Energy contracted: 161.2GWh / year
- Cliente (Proinfa): Eletrobrás
- Price of electricity: Proinfa
- Concession period: 30 years

Praias de Parajuru Wind Power Plant

- Location: Beberibe (102km from Fortaleza), Ceará
- Equipment: 19 rotors of 1,516KW each
- Installed capacity: 28.8MW
- Load factor: >45%
- Energy contracted : 106.6GWh / year
- Client (Proinfa): Eletrobrás
- Price of electricity: Proinfa
- Concession period : 30 years

Praia do Morgado Wind Power Plant

- Location: **Acaraú** (240km from Fortaleza), Ceará
- Equipment: 19 rotors of 1,516KW each
- Installed capacity: 28.8MW
- Load factor : >45%
- Energy contracted : 115.6GWh / year
- Client (Proinfa): Eletrobrás
- Price of electricity: Proinfa
- Concession period : 30 years

Terna (now named TAESA) acquisition - Transaction Summary

- ✓ Power Transmission Company with 3,753 km of lines in 11 Brazilian States
- ✓ Payment of R\$ 2.15 billion on November 3, 2009: partnership with Fip Coliseu
 - The operation involved the purchase of 85.26% of the voting capital, and 65.85% of the total capital
 - Price paid is equal to R\$ 37.14 per “unit” (2 preferred shares + one common share)
 - Represents a multiple of nearly 7.6 times EBITDA
- ✓ Acquisition in partnership with Investment Fund - FIP Coliseu
 - Largest FIP created to invest in the Brazilian electricity sector: R\$ 1.33 billion
 - Attractive to investors, as it comprises assets already in operation
- ✓ Innovative acquisition structure enables Cemig to use it in other expansion opportunities, in line with its long-term Strategic Plan

Rationale of model for Taesa acquisition (with FIP)

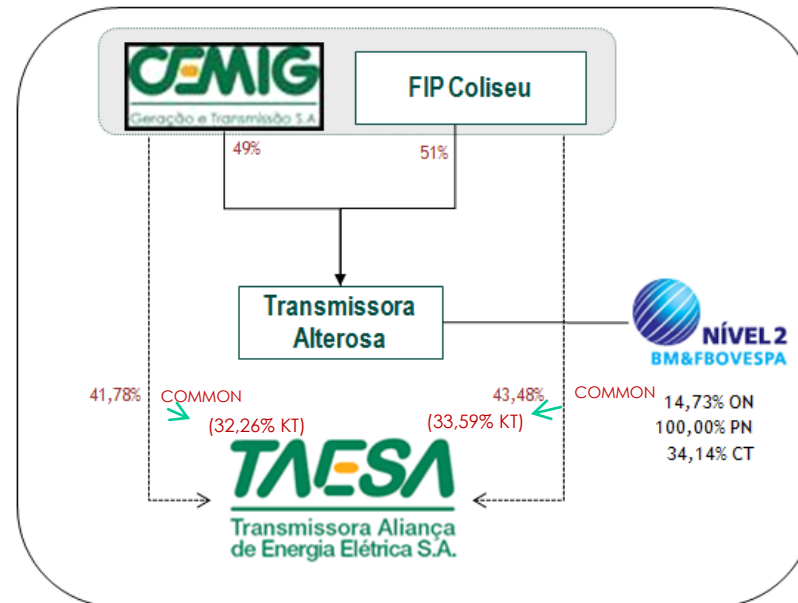

- ✓ In line with the Long-term Strategic Plan
- ✓ Vehicle for growth in the transmission sector
- ✓ Synergies with Cemig's transmission assets, including TBE
- ✓ Operational and corporate gains
- ✓ Possibility of improving Ebitda margin
- ✓ Partnership with an FIP reduces the disbursement on the acquisition, facilitating further acquisitions for Cemig – already in negotiation
- ✓ To ensure future increase of Cemig's share in the transmission sector – up to the target specified by the Long-term Strategic Plan

FIP Coliseu: Efficient vehicle for growth in Transmission

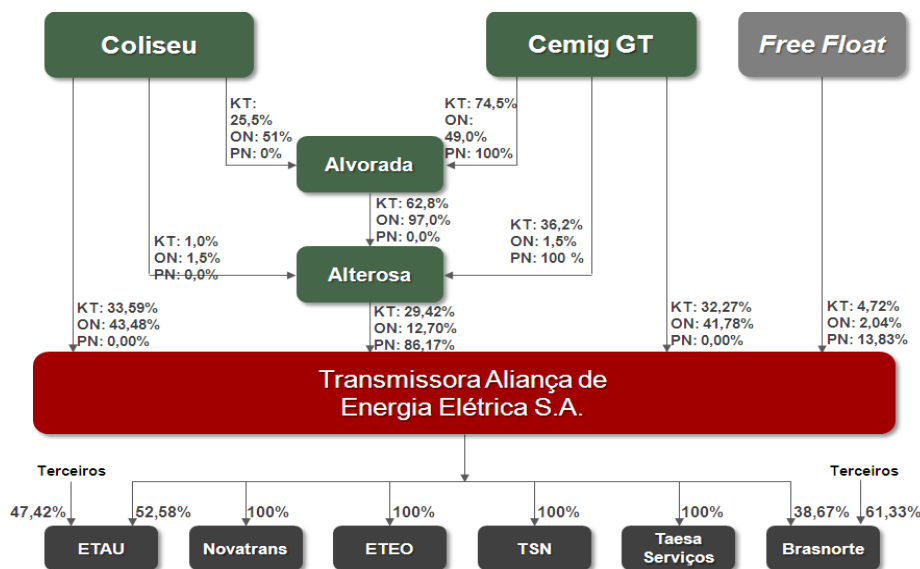

- ▶ On November 4th, 2009, Cemig GT, jointly with FIP Coliseu, acquired 65.85% of Terna Participações S.A., through Transmissora do Atlântico de Energia Elétrica S.A.
- ▶ Atlântico was split, creating Transmissora Alterosa, which will be responsible for the public offer to acquire the free float from minority stockholders.
- ▶ Terna absorbed Atlântico, and its name was changed to Transmissora Aliança de Energia Elétrica S.A. – “Taesa”.

Taes: Structure before public offer

Public offer for shares in Taesa

- ✓ 86% of minority shareholders accepted
- ✓ Updated price per share: R\$ 12.91 (R\$ 38.73 per Unit)
- ✓ Total investment in this offer: R\$ 831 million
- ✓ Settlement: May 11th
- ✓ Cemig's final interest:
 - 56.7% - total capital
 - 48.0% - ON shares
 - 86.2% - PN shares

Increasing stake in Light in 2010 creates new opportunities

- ✓ A 13.03% stake was bought for R\$172M in 2006 (with full payback in 2 years)
- ✓ Cemig D and Light represent almost 16% of electricity distributed in Brazil in 2008
 - Tradition and experience in Light and Cemig brought closer
 - Opportunity to capture synergy gains between assets and processes
- ✓ Cemig GT and Light have opportunities to jointly create value
 - Partnerships have already been made for construction of new hydro plants (PCH Paracambi is already feasible)
 - Opportunity to capture synergy gains in sales in the Free Market
 - Light's "assured energy" will be re-priced in 2013 and 2014, strong likelihood of increasing
- ✓ Cemig increases its exposure to one of Brazil's fastest-growing economies
 - Major increase in investment in the economy of Rio de Janeiro, due to pre-salt oil, and other industrial projects
 - Positive impact in the economy of Rio de Janeiro derived from the Olympics and Soccer World Cup

Summary of the transaction

- Restructuring of the controlling shareholding block of Light
 - AG Concessões and PCP (Equatorial) will sell their stakes in Light
 - Equatorial will undergo a shareholding reorganization
 - Cemig will be a minority shareholder in a Special-purpose Company (SPC) constituted jointly with a new FIP
 - The SPC will hold a stake of up to 26.06% in Light
- Price of the transaction:
 - R\$ 785 million for each 13.03% block of Light, equivalent to approximately R\$ 29.54 per share
 - Payment to AG Concessões for 12,50%, in march, total R\$719 million
 - Payment to PCP after approvals and the shareholding restructuring of Equatorial
 - Price updated by the Cetip CDI rate*, from December 1, 2009
- Good returns and known level of risk:
 - Price paid is 7.22 x 2009 Ebitda, and 6.36 x 2010 Ebitda, according to market consensus figures of November 2009.

* The acquisition's price will be deducted by dividends paid or declared from December 1, 2009

Increasing stake in Light marks the beginning of a new era

- ✓ The increase of Cemig's stake marks the beginning of a second stage in Light's history
 - With the selling of the financial partners' stakes it will be possible to increase the synergy between Cemig and Light
 - Corporate Governance structure will be preserved
 - A new era for Light will be marked by company's growth and improvement in its operational and technical standards, preserving the excellence, culture and values of Light's employees.
 - Market recognition shows that Light is in a growing path.
- ✓ Natural development from the acquisition made in 2006 (1st stage)
 - Turnaround achieved
 - Financial restructuring
 - The company became profitable and began to distribute dividends
 - Interest are aligned between shareholders
 - Acquired in partnership with three partners, through RME
- ✓ Adding value for all shareholders – Light and Cemig
 - Regulated business with predictable revenue at each tariff cycle
 - Stable cash flow, with defensive profile

➤ **Strategy of growth through partnerships has been successful (Light, TBE, Terna)**

Total	2.288	2.109	8	4.439	3.862	15

Consolidated operational expenses

- ✓ Lower personnel expenses reflect reduction in headcount and also the provision for the Voluntary Retirement Program* made in 2Q09
- ✓ Higher consolidated expenses due to non-recurring items
Operational provisions of Cemig D: R\$ 202 million
- ✓ Higher purchases of energy (non-controllable item) by distributors
- ✓ More sales activity results in more electricity purchased for resale by Cemig GT: +R\$ 28mn

(*) For more details on personnel expenses in 2Q10 please see Explanatory Note 28 to the Cemig (Holding Company) Quarterly Information (ITR), under *Personnel Expenses*.

Expansion of consolidated net income

- ✓ Result shows growth consistent with solid fundamentals
 - Growing productivity in all areas
 - Continuous improvement in operational margins
 - Diversification of the risk inherent to each business through integrated structure

Market Recognition

Included in the DJSI for the 11th year running.

Prêmio Anefac
Transparency Trophy, 2010.

Included in The Global Dow Index as the only Latin American electricity company in this 150-company index, and one of the 10 selected to represent emerging markets.

Included in Bovespa Corporate Sustainability Index.

✓ 37th Apimec Award

✓ Best analyst meeting

- Regulatory Framework
- Others

Power Generators are the most exposed to risks

- Regulated market
 - Concessions granted based on the least price approach.
 - Power purchase contract:
 - Auctions organized by a Federal agency:
 - Final buyer : Electricity Distributors.
 - New capacity : longer term, no market risk, inflation adjusted;
 - Existing capacity: shorter term, volume reduction at the distributor discretion, inflation adjusted.
- Unregulated market (free market)
 - Target: large industrial clients, large businesses;
 - Price freely negotiated: conditions , term, inflation adjustment;
 - Usually take or pay contracts.

Power Generation Price Trend

- Price will behave differently according to the nature of the contract to be auctioned by ANEEL:
 - Existing capacity (so called “old energy”) contracts:
 - power to be supplied in a year from now;
 - Term of 8 years;
 - Imply distributor ‘s forecasted demand risk:
 - Contractual volume can be reduced.
 - New capacity (so called “new energy”) contracts:
 - Power to be supplied in three or five years from now;
 - Term of 30 years;
 - No risk on the contractual volume reduction by distributors.

- Wholesale prices resulting from auctions

- Freely negotiated wholesale prices

Distribution Companies

Free Consumers
Special Consumers
Traders
Generators

Co-existence of two markets: competitive, and regulated

Types of contracting in the Regulated Market

	A-5 New Energy Auctions	A-3 New Energy Auctions	A-1 Existing Generation Auctions	Adjustment Auctions		Local Generation Auctions (Distribution Company Option)
Objective	Expansion	Expansion	Existing load	Adjustment of current situation		Existing load
Duration of contract	15 to 30 years	15 to 30 years	5 to 15 years	Up to 2 years		No standard
Market	Regulated	Regulated	Regulated	Regulated		Regulated
Restrictions	None	2% of the load in A-5	Depends on the replacement amount, that is to say the amount of electricity that is being de-contracted in the year the auction is held.	Up to 1% of the demand contracted in A		Up to 10% of the load. Passthrough limited by the Reference Value, that is to say the limit for passthrough to the tariff.
Source (Usual)	Hydro	Hydro and Thermal	Hydro and Thermal	Hydro		Hydro, Thermal and alternative sources

- ❖ Objective: To further increase the security of the System by diversifying supply sources
- ❖ Energy sources: So far specific auctions for Small Hydro Plants (“PCHs”) and plants generating from wind energy and biomass.
- ❖ Contract periods:
 - Hydro: 30 years
 - Biomass: 15 years
 - Wind: 20 years

Power Transmission: Brazil

Transmission (% of 2009 RAP)

Transmission regulation is the most successful one

- Competition for concession contract:
 - Cap price approach;
 - Allowed revenue: the winner bid is the lowest revenue earned from users;
 - 30-year long concession.
- Stable Cash flow
 - Guaranteed contracts signed with users:
 - Receivables pledged as guarantees;
 - Annual inflation adjustment;
 - Revenue secured regardless the use of the asset;
- Low operating risk:
 - Penalties are applied only in the case of bad maintenance or poor performance.
- Fixed income alike investment.

- Facilities built before 1995:
 - Concession will expire on July 8, 2015;
 - 20-year extension may be granted at ANEEL discretion;
 - Allowed return to be reviewed in a near future;
- Expansion projects can be carried out in three ways:
 - New concessions to be granted through auctions:
 - Projects are selected by the ONS in light of the National Grid needs;
 - Auctions are organized by ANEEL;
 - Contracts are standard and term is for 30 years;
 - Bids are made on annual revenue.
 - Authorization to build, directly requested by the ANEEL:
 - In certain cases, ANEEL may request any utility to build a transmission line or a substation of regional impact.
 - Acquisition of existing facility.

Electricity Distribution: Brazil

Main controlling groups in Brazil

- AES
- Ashmore Energy
- Energisa (Cat-Leo)
- Endesa
- EDP
- State-owned, Federal
- State-owned, Indiv. State
- Grupo Rede
- Equatorial Energia
- NeoEnergia
- CPFL
- RME (*)
- Other

Brazil Numbers (2009)

- Concessions: 64
- Consumer units: > 64 million
- Consumption: 388TWh
- Access: 95% of population

Source: Aneel, EPE

(*) Cemig has 13% stake

2009 Distribution – Transported Energy (%)

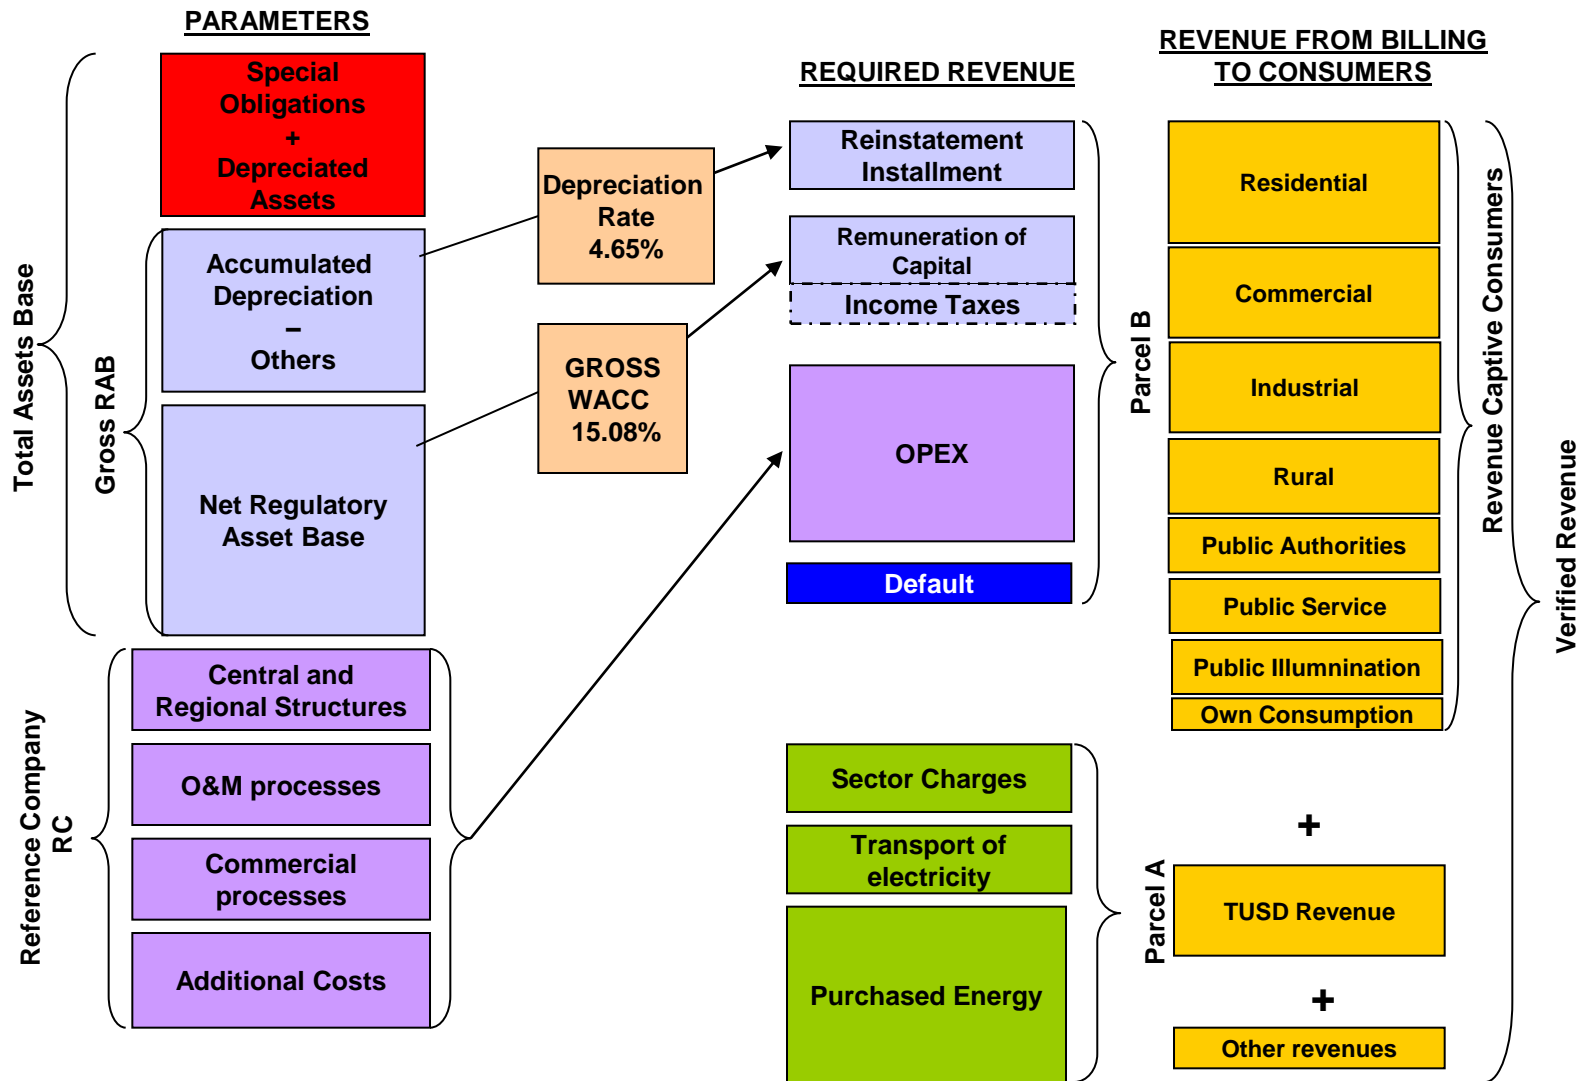

Source: Cemig

Electricity Distribution business is the most regulated one

- Allowed return on asset approach:
 - Benchmark WACC: 9.95 (real)
- Operating expenses:
 - Full passed through mechanism:
 - Energy purchase expenses under certain circumstances.
 - Yearly inflation adjusted;
 - Tracking account for offsetting estimated expenses.
- Revenues come from:
 - Charges on D grid use by the access free users;
 - Sales to captive users.
- 5 year rate setting review:
 - Sharing productivity gains with users.
- Distributors are supposed to buy power to meet 100% of the forecasted demand, through auctions organized by Federal Agency – ANEEL:
 - In case a large consumption client (eligible as free consumer) chooses another supplier, distributor are allowed to reduce the contractual volume at the same amount;
 - If the growth is poor, contractual volume can be reduced by 4% yearly.

Tariff Review Process

- Regulatory Framework
- Others

The Collective Work Agreement for 2009–2010

- ✓ The conditions negotiated with the Unions took the following factors into account:
 - the Tariff Review of Cemig D (Cemig Distribution), which reduced its revenues by 20.81%;
 - the Tariff Review of Cemig GT's (Cemig Generation and Transmission) transmission assets, which increased its revenues by 5.35%; and
 - the lower volume of sales caused by the effects of the financial crisis on industrial clients.
- ✓ **The Salary Agreement included:**
 - increase of salaries by 4.88%;
 - employees' share in the profits for 2009 to total approximately R\$ 210 million; and
 - payment in March 2010 of an advance against the profit shares for that year, in the approximate amount of R \$60 million.
- ✓ **Taking into consideration the tariff reviews and the reduction in sales volume, mentioned above, the payment of profit shares in 2009 is approximately R\$ 160 million less than in 2008, and R\$ 245 million less than in 2007.**

- Average outage frequency (FEC): Average number of outages suffered in a given period per consumer, in a given group of consumers.
- Debt coverage index: Ebitda divided by total financial expenses in the year. This gives a figure for the company's capacity to pay debt servicing.
- Deferred Tariff Adjustment (RTD): Every four years Aneel decides on a "periodic" tariff *review* for each electricity distributor, to adjust the level of annual adjustments to preserve the financial equilibrium of the concession contracts, coverage of efficient operational costs and adequate remuneration of investment. On April 8, 2003, this adjustment for Cemig was set provisionally at 31.53%, but the final adjustment decided was 44.41%, and the percentage difference of 12.88% will be applied to Cemig's tariffs in "deferred" format: i.e., as an addition to each of the annual tariff adjustments decided for the years 2004 through 2007, cumulatively. The difference between the adjustment to which Cemig Distribuição is entitled and the tariff in fact charged to consumers has been recognized in Cemig's financial reporting as a Regulatory Asset.
- Ebitda: Earnings before interest, tax, depreciation and amortization – a measure of a company's operational cash flow, providing an indicator of the cash flow generated by a company's principal business.
- Ebitda margin: Ebitda/net operating revenue. This provides a view of the company's cash generation capacity.
- Hedge: Financial mechanism for protection against fluctuations in prices – e.g. of commodities -, or variables such as interest rates or exchange rates.
- Hydroelectric power plant: A generating plant that uses the mechanical energy of falling water to operate electricity generators.
- Manageable costs: Costs that essentially depend on the efficacy of corporate management, such as personnel expenses, materials, outsourced services, etc. – also referred to as controllable costs.
- Net margin: Net income / Net operating revenue – an indication of a business's profitability.
- Outage time per consumer (DEC): Average service outage time per consumer in a given group of consumers over the specified period.
- The Extraordinary Tariff Recomposition (RTE): This was a tariff adjustment granted by the government in December 2001 to the distributors and generators of the regions where rationing was imposed. It was one of the conditions of the *General Accord for the Electricity Sector*: an increase of 2.9% in the tariff of residential consumers (with the exception of Low-Income Residential Consumers), and an increase of 7.9% for other consumers. Its purpose was to make good the losses suffered by distributors and generators as a result of the reduction of consumption imposed by the government. The duration of the adjustment varies in accordance with the time necessary to recover the loss of each concession holder.
- The CCC (Fuel Consumption Account): This account was created to accumulate funds to cover the increase in costs associated with greater use of thermal generation plants in the event of drought – since the marginal operating costs of thermal plants are greater than those of hydroelectric plants. All Brazil's electricity companies are obliged to make an annual contribution to the CCC, calculated on the basis of estimates of the amount of fuel likely to be required by the thermal plants in the following year.

- The CDE (Energy Development) Account: This is a source of subsidies to make alternative energy sources such as wind and biomass more competitive, and promote universalization of electricity services. It is funded by annual payments made by the concession holders for the use of public assets, and also from penalty payments imposed by Aneel for infringements.
-
- The CRC (Results Compensation Account): Before 1993, electricity concession holders in Brazil were given a guarantee of a rate of return on their investment in the assets used in the provision of electricity to clients, and the tariffs charged to clients were uniform over the whole country. Profits generated by the more profitable concession holders were reallocated to the less profitable concession holders, in such a way that the rate of return on assets was equal to the national average for all of the companies. Though the results for the majority of Brazil's electricity concession holders were deficits, these were posted by the federal government as *assets* in the "CRC account" of each company. When the CRC Account, and the concept of guaranteed return, were abolished, concession holders that had positive balances in their "CRC accounts" were able to offset these balances against any liabilities owed to the federal government.
-
- The CVA – the Offsetting Account for Variations of "Portion A" items: "Portion A" is the list, used in the calculation of the electricity distributors' annual tariff adjustments, of the utility's cost items that are not under its own control. The CVA mechanism compensates for changes in the list's total over the year to the new tariff date. The variation – positive or negative – is passed on in the tariff adjustment .
- The Global Reversion Reserve (RGR): This is an annual amount included in the costs of concession holders to generate a fund for expansion and improvement of public electricity services. The amounts are paid monthly to Eletrobrás, which is responsible for the management of the resulting fund, and are to be employed in the Procel mechanism.
- Thermal power plant: A generating plant that converts chemical energy contained in fossil fuels into electricity.
- Total return to stockholders: Sum of the dividend yield and the percentage appreciation in the stock price.
-
- TUSD – Toll for Use of the Distribution System: This is paid by generation companies, and by Free Consumers, for the use of the distribution system belonging to the distribution concession holder to which the generator or Free Consumer is connected, and is revised annually in accordance with inflation and the investments made by the distributor in the previous year for maintenance and expansion of its network. The amount is: the quantity of energy contracted with the distribution concession holder for each link point, in kW, multiplied by a tariff in R\$/kW set by Aneel.
- Volt: Unit of the electrical potential at which energy is supplied.
- Voltage: For the purposes of efficient transport of electrical energy over transmission lines from the generating plant to the consumer, there are various levels of transmission voltage. Similarly, electricity is used by consumers at various different voltage levels.
-
- Watt (W): Unit of power required for a device to operate. 1,000 watts is a kilowatt (kW), 1 million watt is a Megawatt (MW), and 1 billion watts is a Gigawatt (GW).
-
- Watt-hour: Measure of energy (work done by electric power): The kilowatt hour, Megawatt hour, Gigawatt hour and Terawatt hour (KWh, MWh, GWh, TWh) respectively represent 1,000, 1 million, 1 billion and 1 trillion watt-hours.
